

DCR Consulting

Data Center Migration Program Management

Data Center Migration Program Management

The Challenge

Complex projects such as data center migrations and consolidations affect the entire company, partners, and customers due to the increasing integration of business processes.

This can quickly lead to production interruptions, cost overruns, and damage to reputation due to delays or unplanned outages during implementation.

- How can potential risks be identified, assessed, and appropriate countermeasures initiated in advance?
- How can such a project be realized 'on time and within budget' without being noticed by the end user?
- Does your company have proven methodologies, freelance employees with the required expertise and experience from a variety of data center consolidations?
- How much downtime is tolerable for your company?

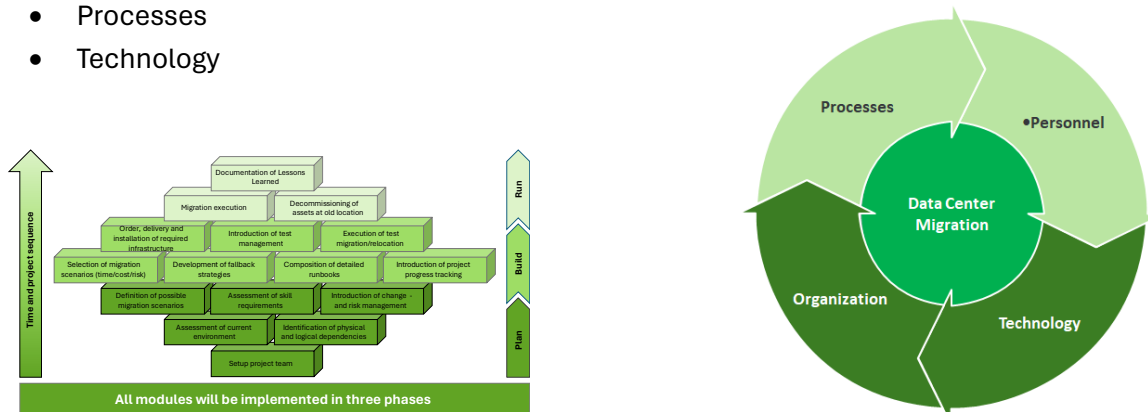

Data center migrations are complex projects that affect all layers of a company. In order to carry out a migration without affecting daily business processes, all dependencies and influencing factors must be known. During migration waves, the activities of several hundred participants must be precisely planned and controlled. Migration procedures must balance time, cost and risk while meeting availability requirements. A structured and proven migration methodology is crucial for success.

Our solution

DCR Consulting has comprehensive expertise in data center migrations and professional project management, gained through years of experience. With a proven and structured approach model, DCR Consulting is your reliable partner for conducting regional, national, and global data center migrations.

The best practice approach of DCR Consulting enables robust planning from the outset and encompasses the following four core dimensions:

- Organization
- Processes
- Technology

Data Center Migration Program Management

Our consulting approach

DCR Consulting's professional project management always keeps the critical success factors for data center migrations and consolidations in focus.

Key aspects include:

1. Holistic consideration of the four affected dimensions: Personnel, Processes, Organization, and Technology.
2. Alignment of the project with production and technical requirements, involving release management, departments, and integration of the change calendar.
3. Identification of dependencies between applications and systems: comprehensive application-server mapping, intelligent structuring of migration packages, and robust scheduling of timelines and resources.

Your benefits

DCR Consulting provides manufacturer-independent advice in all phases of conception and implementation. Through our methodical and structured approach, you and your stakeholders gain clarity on scenarios, core activities, costs, and risks. Our approach and comprehensive experience in program management for data center migrations and consolidations ensure the efficient and effective achievement of defined project goals, including technical and methodological quality assurance.

What we offer

We have extensive expertise in the field of data center migrations and consolidations. The key assets of DCR Consulting are our experienced consultants, the proven approach model and toolset, as well as deep industry expertise in banking and insurance, automotive and supplier industries, public institutions, tele-communications companies, and energy clients.
